

Runbook: Feed SLAs and Late File Handling

Document ID: NWB-RB-402 | Version 2.3 | Last reviewed 2026-05-15 | Owner: Data Platform Engineering

1. Feed SLA Table

All times are US Eastern. The **hard cutoff** is the latest arrival time that still allows the feed to be included in same-day Sentinel TM scoring (extract at 06:30, scoring at 07:00).

Feed ID	Content	Expected	SLA	Hard cutoff	Upstream owner
WIRE_DAILY	Fedwire and SWIFT wires	04:30	05:30	06:15	Payments Operations
ACH_DAILY	ACH credits and debits	03:00	04:00	06:15	Treasury Operations
CASH_TELLER	Branch cash and teller transactions	02:00	03:30	06:15	Retail Branch Systems
CARD_AUTH	Debit card authorizations	01:30	03:00	06:15	Card Services
CUST_MASTER	Customer master and KYC attributes	00:30	02:00	05:00	Core Banking

2. SLA Breach (file not received by SLA time)

- 1 Declare a **Sev-3** incident and post in #hdl-incidents.
- 2 Contact the upstream owner's on-call (see NWB-RB-403 for contacts) and get an ETA.
- 3 Check the landing bucket every 15 minutes; if the file arrives before the hard cutoff, process normally.

3. Hard Cutoff Breach

- 1 Upgrade to **Sev-2** (same-day alerts for the feed will be missed).
- 2 Set hold_flag = true for the feed so Sentinel does not score the day without it.
- 3 Notify the FCC Operations Manager within 1 hour of the cutoff breach.
- 4 When the file arrives, load it using NWB-RB-401 steps 4 through 8.
- 5 Run an off-cycle Sentinel TM scoring job for the feed, targeted to complete by 14:00 ET.
- 6 If off-cycle scoring cannot complete the same business day, FCC Operations requests a lookback run (NWB-POL-101 section 6).

4. Repeated Late Arrivals

If the same feed breaches its hard cutoff twice within 6 months, Data Platform Engineering must open a problem ticket with the upstream owner and review it in the monthly FCC data quality forum.
